In October, 1970, a symposium entitled "Dentistry—Year 2000" was held in Indianapolis as part of the sesquicentennial celebration of Indiana University. The symposium was co-sponsored by the Sesquicentennial Committee of the University and by the Johnson & Johnson Company, New Brunswick, New Jersey.

Because of the importance of the subject matter and the excellence of the papers, a major portion of this issue of the Bulletin is devoted to the proceedings of that meeting. Three of the papers are published while the remaining two have been abstracted.

I believe that you will find these reports stimulating and relevant to the future of dentistry. Dr. Derry and I once again wish to thank the participants, the supporting agencies, and those who were in attendance.

Ralph W. Phillips
Economics and the Delivery of Health Care

Private practice as we know it today will have ceased to exist in the year 2000. Have no doubt about that prediction! Forgive me if I disturb your sense of security in planning for the practice of the future, or dash your hopes concerning any ideas you may have had regarding whom you would treat, how you would treat them, the fees you establish, even the hours you would work. Please excuse me if I shatter your tranquility by prophesying unsettling changes in the control and conduct of dental practice. But fasten your seat belts, for the trip to the year 2000 will be turbulent!
